Health Test Requirements

As a CSS export-qualified facility, under biosecurity guidelines all bulls entering isolation collection housing are required to be tested and negative for the following:

- TB intradermal injection (within 60 days prior to arrival)

The following (within 30 days prior to arrival):

- Brucellosis CARD (for non-export semen), BAPA or CF (blood test for export semen)
- BVD PCR (preferred) OR antigen capture ELISA
- Bovine Leptospirosis- 5 strains, negative at 1:100, for serotypes:
 - L. Pomona
 - L. Hardjo
 - L. Canicola
 - L. Icterohaemorrhagiae
 - L. Grippotyphosa
- Tritrichomonas PCR by preputial swab

Please have your veterinarian perform a physical exam at the time of these tests and indicate any abnormal findings. Do NOT vaccinate your bull prior to testing, as this can cause positive test results.

If you are conducting this health testing to begin the process of CSS testing for semen export eligibility:

1. Please consult with our staff to determine tests required for specific export countries
2. Bulls are required to have an official ID listed on all tests. Tattoos do NOT count as official ID.

Performing health tests on site is a service that ShowMe Genetics offers every Tuesday. If you would like us to perform the tests on your bull for you, he must be dropped off in our Pre-Entry barn no later than 4:00 PM the Monday before. A completed collection contract is required before drop off. Please call ahead to reserve your spot!

****Completed health tests and collection contracts are required prior to arrival. They may be emailed to aubrey@showmegen.com or steven@showmegen.com. If you have any questions, don't hesitate to call us and we will be happy to help!**
